

# HIBRIX

## BROAD ACRE

Hibrix Broad Acre has been formulated to provide all the macro and micro nutrient requirements for broad acre crops. This coupled with an increase in rain utilisation efficiency and improved resilience to frost and early heat puts broad acre farmers in a good position to make the most of adverse environmental conditions.

- ✓ Reduces input cost
- ✓ Boosts plants natural immune system
- ✓ Increase water utilisation efficiency
- ✓ Increased nutrient density
- ✓ Improved soil

Hibrix is easy to apply, has a long shelf life and consistently produces good results.

### Application Rates

Standard application	1.5 - 2.5 litres per hectare. Dilute with water to a minimum ration of 1 : 50.	Apply direct to ground through standard spray gear.	Apply first application within two weeks of seeding. Second application (if necessary) should be before seed set. Avoid contact with skin and eyes. If swallowed seek medical attention.
Remedial application (for stressed crops)	2.5 - 3.5 litres per hectare. Dilute with water to a minimum ration of 1 : 50.	Apply direct to ground through standard spray gear.	

Larger, more nutrient dense grains with low water content.

Because conditions vary so widely with the soil, climate and plant involved, Hibrix encourages farmers to experiment with small areas to establish the best application rates for their own farm.
